

Lightweight and agile.

FRAME YOUR FACTORY with the EcoShape
tubular framing system from Bosch Rexroth.

THE ORIGINAL
BOSCH PROFILE

Only from

rexroth
A Bosch Company

Reduce weight by up to 30% compared to similar systems made from steel.

EcoShape combines unrivaled flexibility and versatility with very simple handling. The Poka-Yoke principle of the system ensures straightforward assembly. All components are reusable and recyclable and therefore make a valuable contribution to economic efficiency and sustainability.

FRAME YOUR FACTORY

with the EcoShape tubular framing system from Bosch Rexroth

CHALLENGES

Manufacturing companies are coming under unprecedented pressure to make their production sustainable and future-oriented. Product life cycles are becoming ever shorter and increasingly uncertain.

To ensure sustainable and future-proof production, the first step is to minimize waste as a means of long-term cost reduction. This is achieved by maximizing the efficiency of production processes and subjecting them to ongoing development. At the same time, minimizing the use of materials helps to cut energy consumption and reduce greenhouse emissions.

The objective is clear: Lower investments and sustainable prevention of waste – in all elements of the process.

LEAN PRODUCTION

An important element of lean production is Karakuri, which is the Japanese word for "mechanism". In industrial production and logistics, Karakuri stands for mechanical (low cost) automation. A typical example of Low Cost Automation (LCA) is the use of gravity and leverage. These methods are used in the material feed, for example, to bring cases into the correct position by mechanical means.

Karakuri concepts are developed in collaboration with production associates, thereby making use of their process and workflow expertise.

Only a small number of very simple tools are required for construction and maintenance. The associates are able to maintain the systems themselves and can perform smaller repairs independently and without assistance.

The solutions are usually very simple and, most importantly, can be changed as necessary. Typical applications include:

- ▶ **Workstations**
- ▶ **Flow rack systems**
- ▶ **Material shuttles**

YOUR BENEFITS

Be it material shuttles, flow rack systems or workstations – with the EcoShape tubular framing system, users can plan robust shopfloor solutions both quickly and sustainably.

Poka-Yoke, Kaizen, Low Cost Automation (LCA), Lean Design: Based on the principles for continuous improvement and standardization, EcoShape from Bosch Rexroth provides customers with a modular construction kit for assembling ergonomic workstations and frames – for use in production and logistics.

The EcoShape construction kit allows Karakuri concepts to be developed and implemented directly on-site, with maximum speed and simplicity. The kit is compatible with the broad aluminum profile range from Bosch Rexroth.

Sturdy and cost-effective

EcoShape provides budget-conscious users with an incredibly simple and quick alternative for building flow racks, material shuttles and workstations.

With the new generation, the stability of the tubular framing system has once again been significantly increased, especially with regard to dynamic load capacity and settlement behavior.

Individually expandable

Applications created with the innovative aluminum tubular framing system can not only be set up and rebuilt quickly – they can also be expanded as required.

Thanks to the integrated 10 mm slot, EcoShape is compatible with the Rexroth aluminum modular profile system.

Quick planning and implementation

With EcoShape, users can plan and create a wide range of applications in a short time and with few components.

The **MTpro** planning software also provides support with specific ideas and application models. The range of applications extends from material shuttles and flow racks to workstations and complete assembly islands.

More information and downloads for MTpro can be found here: www.boschrexroth.com/mtpro

Online

Further details, technical data, product specifications and CAD drawings are available online in the Rexroth Store.

PRODUCT OVERVIEW

Secure connection based on Poka-Yoke principle

The connectors are developed according to the Poka-Yoke principle. Accidental mistakes during assembly are prevented by the design.

- ▶ Anti-torsion element for secure joints
- ▶ Form-fit connection
- ▶ High dynamic load capacity

All connectors are suitable for setting up ESD-conductive systems.

IT'S ALL ABOUT THE SERVICE

Long service life and rapid response.

Our goal is for you to benefit from your Bosch Rexroth solutions for as long and efficiently as possible. The availability of spare parts, repairs and technical support is not only guaranteed as standard for all products in our current portfolio, but also for a period of up to ten years beyond the active sales phase. Thereafter, we offer further support during an extended service phase. In many cases, this enables machine running times of more than 25 years, which are also secured through service agreements.

Our extensive service network comprising over 200 locations in 80 countries ensures a rapid response at all times.

Original quality for maximum durability.

The Bosch Rexroth repair service analyzes, repairs and optimizes Bosch Rexroth components in guaranteed OEM quality. We use only new, original spare parts for repairs. As a result, the average lifespan of our repaired products is 5 times longer than with other workshops. In addition, our scalable material warranty can be extended up to 60 months.

You simply inform us about the urgency of the repair and provide the product type or serial number. You can then choose between a repair, REMAN or replacement service.

Immediate assistance at the press of a button.

In the event of a malfunction, you require help in a hurry. Our Digital Service Assistant (DSA) puts the solution in your hands. Open the DSA on your mobile device to gain easy, 24/7 access to our entire range of services. The app is available in your local language and allows you to identify the relevant product via a code scanner. You can also request services, such as a repair, using the app. You will then receive a non-binding offer within one hour (7 a.m. to 5 p.m. CET). The collect and delivery service is available free of charge for components weighing up to 40 kg.

24/7 emergency support.

We know our technologies inside out. That is why we find the right solution as quickly as possible. Our repair service and hotline are available to you round the clock. They offer free technical support – from initial troubleshooting to dispatching a service specialist. You have the choice between standard, priority or emergency rush repair service.

Predictive.

To ensure that you can act instead of react, we offer you predictive services, such as preventive maintenance based on the product-specific history. And not just for our current product range: We have all global repair and delivery data to hand so that your system can continue to perform at its best, year after year. We support you by:

- ▶ Analyzing product availability
- ▶ Defining the best time for preventive maintenance
- ▶ And much more besides

TOGETHER WE WILL FIND THE PERFECT SOLUTION FOR YOU

- ▶ **Repair of the faulty product, according to manufacturer specifications**
- ▶ **Replacement: Where available, you replace the faulty product with a refurbished original with full manufacturer warranty. This service also helps to protect resources and reduces costs.**
